

NoteMachine launches BankHive, the fully functional, modular, multi deposit, 'Bank in a Box'.

At RBR Branch Transformation 2022, NoteMachine, the technology-first, financial services business that serves the banking sector, launches BankHive, the new cost-effective way to bring banking back to the consumer whilst putting cash back into the community.

BankHive is a unique modular banking solution, supplied, installed and fully managed for financial institutions by NoteMachine, the financial services company that operates as a corporate partner to the UK banking and financial sector.

BankHive is a drop-down, plug-and-play, fully functional banking facility that can be located in any retail environment wherever the public needs banking services and access to cash.

BankHive solutions are modular, fully customisable and will meet the needs of both the financial institution and the customer. At the heart of every BankHive is a multi-bank deposit solution provided by Vocalink, utilising LIS5.

BankHive offers a menu of service options based on individual needs, including:

- Automated LIS5 deposit
- Cash withdrawals
- Business cash and bag drop deposit
- Coin dispense and deposit
- Call centre and help desk
- Automated reception and meet & greet
- Private meeting rooms
- Branch host to support banking personnel
- Transaction processing
- Cash management, monitoring, reconciliation and delivery/collection
- Engineering and call centre support

Working with BankHive, financial institutions need only one point of contact when deploying banking hubs into the community. BankHive will identify the site location, design, build and deploy. When creating a BankHive with NoteMachine, we will provide the following services:

Design and Build

- Conceptualise and design a BankHive to your specific brief and needs
- Build and fit out based on final agreed location, build specification and budget
- Deliver, install, commission and manage including staffing if required

Locate and Negotiate

- Find potential sites within your chosen location parameters
- Negotiate with landlords or property owners and agree terms
- Manage all processes associated with leases, rates and services

Manage

- Manage the site, technology and people
- Provide and support all technology and services
- Develop solutions to meet the changing needs of both bank and customers
